

This is our most current layout for a **QUAD** on a kneeboard. Typically, the back fin is placed the same distance in from the rail as the front fin, but on fishes the back fin needs to be shifted in a little more to keep some spread from the front fin. This should be considered a starting point for your own designs. The spread on the side fins is 1/4" [6mm].

We use a G Square for our fin layouts, so the fin base width is the standard 4.50" used on the square.
